

# 5 key roles in project management

There are many different job roles that contribute to the success of any given project. Here is a list of just 5 key job titles in project management and a description of why they are so important.

## Board

The board oversees the whole project and is the first port of call when strategic problems need to be solved. This role is usually only required for larger projects.

## Administrator

Administrators are responsible for the maintenance of key project tools, such as a website or the project plan and generally support the project manager.

## Programme manager

Key aspects of the programme manager's role are to help deliver change, co-ordinate the programme's projects and manage their inter-dependencies.

## PMO manager

The PMO (Project Management Office) Manager's role is to ensure that the organisation's standards are upheld throughout the delivery of every project.

## Project communications officer

They put together the project communication plan and communicate with stakeholders at all levels, providing them with up to date and relevant information.
